

Haul Truck Bodies

Schlam has created a speciality in haul truck body repair and refurbishment. To optimise client production, we offer an end to end service, from on-site wear management and life cycle planning, to refurbishments.

“Schlam is diligent and rigorous in the way they look after our trays. Whenever serious repairs are required, they get our trays back to working like new quickly and efficiently.”

Trevor Rose
Maintenance Manager
Macmahon Contractors

Capability

Services we provide on-site and off-site include:

- Non Destructive Testing and wear mapping
- Life cycle planning and costing
- Condition monitoring and performance analysis
- Payload optimisation recommendations
- Wear liner supply and replacement
- Aftermarket OEM parts
- Maintenance and Repair Contract (MARC) agreements
- Line boring
- Surface treatment
- 24/7 operation for prompt turnarounds

Results delivery

Schlam has developed a range of standard work procedures and safe operating procedures to ensure that our service provides industry leading performance in quality and safety.

As part of our wear management consultancy service, we will assess current wear package systems and recommend improvement opportunities that exist to enable higher payload and increased cost efficiency from your hauling equipment.
