

Design and Drafting

Schlam Engineering's design and drafting services are carried out by qualified engineers and certified by them, ensuring superior service and the best possible result. Our designs take into consideration the brand of your plant and equipment, its age, its repair history, the environment in which it operates, its workload and your production goals.

Capability

Schlam uses the latest Solidworks and Polyworks software to create designs from concept to finished product as efficiently as possible. Our Faro X130 scanner allows us to reverse engineer plant and equipment for accurate fit-up of designed components, refurbishment and repair, but to name a few. Services offered include:

- 3D Modelling
- Technical Documentation
- ISO 9001 Accredited
- 3D Scanning/Reverse Engineering
- Emphasis on Safety, Maintenance and Cost

Results delivery

With fully qualified, highly experienced individuals and cutting-edge design technology at our disposal and our dedication to the Schlam ethos of can do, will do, done safely, we can provide you with the best possible design and drafting solutions for your mobile and fixed equipment.
