

Wear Management Services

Schlam's wear management offering includes condition monitoring and associated maintenance and repair services. We continually improve our client's productivity through equipment efficiency optimisation. We have a specialisation in mining buckets and haul truck bodies.

"Safe and effective maintenance activities require a professional approach and the necessary skills and equipment to back it up. In my experience this is exactly what Schlam Engineering delivers."

Jim Beyer

Chief Executive Officer
Mount Gibson Iron Limited

Capability

Our industry leading wear management service covers:

- Baseline assessments, data collection and analysis
- Continuous Improvement Programs
- Wear package and Ground Engagement Tool (GET) selection
- Life cycle planning and costing
- Condition monitoring and performance analysis
- Payload Optimisation
- Waste reduction

Results delivery

Our assessments on current wear package/liner systems allow us to identify areas for improvements to increase operating efficiency, decrease down-time, reduce operating costs and reduce safety risk associated with maintenance activities.

Schlam customizes your wear materials to suit your requirements whilst ensuring equipment cycle times are at their optimum to deliver maximum value to your operation.
